§1 — INTRODUCTION & PLATFORM OVERVIEW

What Is Attenda?

Attenda is an all-in-one hospitality operations platform built by **Quantum Hospitality Solutions (QHS)** — a company founded on 15+ years of hands-on hotel management. It replaces the fragmented patchwork of spreadsheets, group chats, and single-purpose tools that most independent hotels still rely on, and consolidates them into a single, role-aware system accessible from any device.

Attenda is not a property management system (PMS). It does not handle room inventory or reservations. Instead, it operates in the operational layer that sits above the PMS — coordinating staff, serving guests, managing vendor relationships, and giving general managers real-time insight into the health of their property.

What's New in v2

Area	v1	v2
Shuttle dispatch	Slot-management view	Quick Dispatch bar + hourly timeline + Bouncie GPS
Staff schedules	Basic add/delete	Edit modal, templates, copy-week, auto-role, TBD shifts
Knowledge base	Keyword matching	AI-powered suggestions via Claude API
Vendor onboarding	Manual (admin only)	Self-service /apply page + inbox
Guest food orders	Order + static confirmation	Live order tracking page (/track)
Revenue tracking	None	Revenue Dashboard with partner breakdown
Team culture	None	Culture Hub: leaderboard, rewards, birthdays, events
Front desk tools	Call Around, Logs	+ Bank Count (cash drawer denominations)
Payments	Cash only	Stripe card payment integration
Callouts	Basic list	Full workflow: report → approve → find cover

Platform URL Structure

https://attendaapp.com/	→ Guest-facing hotel page
https://attendaapp.com/staff	→ Staff dashboard (login required)
https://attendaapp.com/vendor	→ Vendor portal (vendor login required)
https://attendaapp.com/apply	→ Partner self-onboarding (public)
https://attendaapp.com/track	→ Order tracking (public, orderId param)
https://attendaapp.com/nearby	→ Guest food & services ordering (public)
https://attendaapp.com/superadmin	→ Platform administration

§2 — ARCHITECTURE & MULTI-TENANCY

Technology Stack

Layer	Technology
Frontend	Next.js 14.2 (App Router, React Server Components)
Styling	Tailwind CSS 3.4
Database	Supabase (PostgreSQL 15, Row-Level Security)
Auth	Supabase Auth + custom session metadata
Email	Resend
Payments	Stripe
GPS Tracking	Bouncie API
Ride Dispatch	Uber Direct API
AI	Anthropic Claude API (claude-haiku-4-5-20251001)
Hosting	Vercel (Edge Functions, ISR)

Multi-Tenant Architecture

Every record in the database carries a `hotel_id` UUID column. Supabase Row-Level Security (RLS) policies enforce that authenticated sessions can only read or write records matching the `hotel_id` embedded in their JWT claims.

```
-- Example RLS policy (enforced at DB layer)
CREATE POLICY "hotel_isolation" ON requests
  USING (hotel_id = (current_setting('request.jwt.claims')::json->>'hotel_id')::uuid);
```

Session Architecture

Staff Sessions: Staff log in via `/staff` with email + password. The JWT contains `hotel_id`, `role`, `vendor_type`, and `name`. The frontend reads these claims to control which tabs are visible.

Guest Sessions: Guests do not create accounts. A lightweight check-in (name + room number) creates a `guestSession` in `localStorage`. No server-side session is created for guests.

Vendor Sessions: Vendors log in via /vendor. Vendor accounts are scoped to a single property and vendor_type.

§3 — USER ROLES & PERMISSIONS

Role Hierarchy

```
SuperAdmin
├── Admin (General Manager)
│   ├── Manager (Supervisor)
│   │   ├── Staff (Front-line)
│   │   └── Vendor (Partners)
```

Permission Matrix

Feature	SuperAdmin	Admin	Manager	Staff	Vendor
Revenue Dashboard	✓	✓	—	—	—
Staff Management	✓	✓	—	—	—
Property Settings	✓	✓	—	—	—
Schedules (edit)	✓	✓	✓	—	—
Schedules (view)	✓	✓	✓	✓	—
Callouts (approve)	✓	✓	✓	—	—
Callouts (submit)	✓	✓	✓	✓	—
KPI submit	✓	✓	✓	✓	—
Vendor applications	✓	✓	—	—	—
Order status update	—	—	—	—	✓
Culture Hub	✓	✓	✓	✓	—
Learning & HR	✓	✓	✓	✓	—

§4 — DAILY BRIEF DASHBOARD

The Daily Brief is the first screen staff see after logging in — a snapshot of the day ahead in under 60 seconds. It is refreshed in real time and designed for the daily standup or pre-shift meeting.

Dashboard Sections (8 Configurable)

#	Section	Contents
1	GM Notes	Manager bulletin board, free text, timestamped entries
2	Quick Stats	Occupancy / Arrivals / Departures / Pending Requests tiles
3	Activity Feed	Real-time stream of all module activity
4	Crew Briefing	Shift handoff announcements from admin
5	KPIs Summary	Today's KPI submission status across all categories
6	Pending Requests	Most recent unresolved guest requests
7	Shuttle Times	Today's scheduled shuttle departures
8	Forecast Summary	Today's occupancy forecast in single-row view

Widget Customizer (v2)

Each staff member can personalize their Daily Brief. Click the ⚙ gear icon (top-right of Dashboard) to toggle any of the 8 sections on or off. Preferences persist in localStorage per device.

Print Brief

Admins can print the current brief via the printer icon button. The browser print dialog opens with a clean, sidebar-free layout hiding all interactive elements.

§5 — REVENUE DASHBOARD

V2 NEW

The Revenue Dashboard gives General Managers a consolidated view of all revenue flowing through Attenda.
Access: Admin section only.

Business Model

Party	Share	Notes
Vendor / Partner	90%	Transferred to partner after transaction
Hotel (Attenda commission)	10%	Retained by property
Card processing fee	3%	Applies to all Stripe transactions

KPI Cards

Card	Calculation
Total Revenue	Sum of all order gross amounts in period
Hotel Commission	10% of Total Revenue
Transactions	Count of completed orders

Partner Breakdown Table

Shows per-partner: Partner name | Orders | Gross Revenue | Hotel Commission | Avg. Order | Status. Clicking a row drills into that partner's individual order history.

Data Sources

Revenue Type	Source Table	Key Fields
Food orders	requests	type='food_order', total_amount, vendor_payout
Shuttle bookings	shuttle_bookings	price_per_person, pax
Transport requests	requests	type='transport_request'

§6 — GUEST REQUESTS & FOOD ORDERS

Guest Ordering Experience

Guests access ordering via QR code in their room → `attendaapp.com/nearby?hotel={slug}`. No app download required. After a lightweight check-in (name + room), guests browse partner menus, add to cart, and checkout.

Cart & Checkout (v2)

Cart Badge: A persistent cart icon in the menu header shows current item count. **Stripe Payments:** Card payments processed via Stripe — 3% fee displayed before confirmation. **Room Charge:** Alternative payment option charged to the folio.

Order Tracking (v2)

After placing an order, guests receive a **Track Order** link: `attendaapp.com/track?orderId={uuid}`. The page is public (no login), updates in real time via Supabase Realtime, and shows:

● Placed → ● Received → ● Preparing → ● Ready → ○ Delivered

Request Types

Type	Display Name	Routed To
food_order	Food Order	Vendor + Staff inbox
transport_request	Transport	Staff inbox
housekeeping	Housekeeping	Staff inbox
maintenance	Maintenance	Staff inbox
message	Guest Message	Staff inbox
amenity_request	Amenity Request	Staff inbox

§7 — FRONT DESK OPERATIONS

The Front Desk Operations module consolidates daily logging tasks into a structured, searchable, auditable digital record. Accessible via sub-tabs in Daily Ops.

Sub-Modules

Sub-tab	Purpose	Key Fields
Call Around	Log outbound calls to guests	Guest, room, call type, outcome, notes
Daily Logs	Incident & event log (Manager's Log)	Category, description, action taken
No Shows	Track guests who didn't arrive	Guest, reservation, attempts, notes
Room Moves	Log guest room changes	From room, to room, reason, authorized by
Bank Count	Cash drawer denomination tracking	All denominations, paid outs, petty cash

Bank Count (v2)

Digitizes the cash drawer count replacing paper bank count sheets. Denominations: \$100, \$50, \$20, \$10, \$5, \$1 bills; half-dollars, quarters, dimes, nickels, pennies. Auto-calculates: Drawer Total, Paid Outs, Petty Cash, Net Drawer. Done at shift start and end.

§8 — SHUTTLE & TRANSPORT

Completely redesigned in v2 as a real-time dispatch tool. A new booking can be logged in under 30 seconds. Three tabs: **Today** (hourly timeline), **Requests** (history), **Setup** (admin config).

Quick Dispatch Bar (v2)

The **+ New Pickup** button opens a bottom-sheet form with: Trip Type (Arrival/Departure), Guest Name, Room #, Party Size (stepper), Pickup Location, Drop-Off, Requested Time, Notes, and Assignment (In-House Driver or Send Uber).

Hourly Timeline (v2)

The Today tab shows all shuttles organized by hour. Each card shows: guest name, room, pax, pickup → dropoff, assigned driver or Uber badge.

Status	Visual
pending	Amber border + amber background
assigned	Blue border
in_progress	Teal border + teal background
completed	Green muted, slightly faded
cancelled	Gray, strikethrough text

Bouncie GPS Integration (v2)

For hotels with Bouncie GPS trackers: a live map above the timeline shows vehicle location in real time. Configure via Admin → Property Settings → Bouncie credentials.

Uber Direct Integration

Selecting "Send Uber" in dispatch calls the Uber Direct API to request a driver. The response includes estimated pickup time and a tracking URL stored on the card.

§9 — STAFF SCHEDULES

Schedule Grid

A week-at-a-glance grid: columns = Mon–Sun, rows = staff members, cells = shift cards. Amber cards with "→ TBD" indicate housekeeping open-ended shifts.

Adding a Shift

Click **+ Add Shift**. Role auto-fills from the selected staff member's profile (v2). For housekeeping, check "Open end time" — shift stored with NULL end_time and shown as → TBD in amber.

Editing a Shift (v2)

Clicking a shift card now opens an **Edit modal** (v1 deleted immediately — redesigned in v2). Modal actions: **Save Changes** (blue) or **Delete Shift** (red, deliberate).

Copy to Next Week (v2)

The **Copy to Next Week** button duplicates all current week's shifts +7 days. Confirmation shown if next week already has shifts.

Schedule Templates (v2)

Action	Button	What It Does
Save Template	Bookmark icon	Saves current week as a named template in localStorage
Load Template	Folder icon	Applies a saved template to the current week, maps by day-of-week

TBD Shift End-Time (v2)

Supervisors tap the amber "→ TBD" badge to set the actual end time via inline popover. Updates immediately.

§10 — STAFF CALLOUTS & COVERAGE

Staff: Reporting a Callout

Any staff member clicks **Callouts** → **Report Callout** and fills in: Shift Date, Reason (Sick/Personal/Family Emergency/Other), Notes. Managers see it immediately with a badge count on the Callouts tab.

Manager: Actions

Action	When	Result
Approve	No coverage needed	Closes callout, removes from pending count
Find Cover	Shift must be filled	Opens Schedules filtered to callout date

A **red dot** on the Schedules tab date header indicates a callout exists for that day.

§11 — CULTURE HUB V2 NEW

A team engagement layer that increases retention and morale through recognition, milestones, and community.

Leaderboard

Monthly points ranking across all staff. Gold / Silver / Bronze for top 3. Points earned via KPI submissions, training completions, guest commendations, attendance. Resets monthly.

Rewards Catalog

Admins configure redeemable rewards (preferred parking, gift cards, paid meals). Staff redeem points; admins approve from a pending queue.

Birthday Tracking

Upcoming birthdays in the next 30 days shown in Culture Hub. Birthday notification appears in Daily Brief on the staff member's day.

Team Events

Managers post upcoming team events (meetings, outings, celebrations) with date, location, description, and optional RSVP.

§12 — KPIS & MARKETPLACE

KPI Categories

Category	Example Metrics
Revenue	ADR, RevPAR, Ancillary Revenue
Operations	Maintenance Resolution Time, Room Turnaround
Guest Experience	NPS, Complaint Rate
Quality	Inspection Score, Defect Rate
Housekeeping	Rooms Cleaned, CPOR
Front Desk	Check-In Wait Time, Upsell Conversion

Marketplace (v2)

Community library of pre-built KPI packs and To-Do packs. Each pack shows name, category, install count, and star rating. Click **Install** — definitions are added to the hotel's active configuration immediately.

§13 — PARTNER NETWORK & VENDOR ONBOARDING

Partner Categories

Category	Examples
Restaurant	Local restaurants, cafes, room service
Transport	Car services, tours, charter boats
Service	Spa, laundry, pet care
Experience	Tours, shows, sporting events

Vendor Self-Onboarding (v2)

Public apply page at `attendaapp.com/apply?hotel={slug}`. No login required. Form: Business Name, Contact, Phone, Email, Business Type, Description. On submit → stored in `partner_applications` → staff notified → approve or reject in Partners inbox.

Share Apply Link: In the Partners tab, click **Share Apply Link** — copies the full URL to clipboard for distribution.

§14 — VENDOR PORTAL

Login (v2 enhanced)

Vendors log in at `attendaapp.com/vendor` with tenant-scoped email + password. Sessions are scoped to a single `hotel_id` + `vendor_type`.

Order Board — Status Workflow

Button	Transition	Guest Sees
Accept Order	New → Received	Order Received
Start Preparing	Received → Preparing	Preparing Your Order
Mark Ready	Preparing → Ready	Order Ready
Mark Delivered	Ready → Delivered	Delivered ✓

Each status change updates the guest's `/track` page in real time via Supabase Realtime. An audio notification sounds on new order arrival.

§15 — RIGHT ANSWERS KNOWLEDGE BASE

AI Suggestion Engine (v2)

When no KB entry matches, staff click **Get AI Suggestion**. The request goes to /api/ai-suggest → Claude API → professional hotel response in 2–5 seconds. AI suggestions are not automatically added to the KB — managers review and approve.

KB Contribution Workflow

Staff submit suggestions → stored as kb_suggestion records → Manager/Admin reviews in the **Pending** tab → Approve (adds to live KB) or Reject (with feedback).

§16 — LEARNING & HR

Course Structure

Courses contain Modules (text/video/PDF) and Quizzes (multiple choice, 80% to pass). Staff see progress bars per course; completion earns a Certificate. Admins see a training matrix showing all staff × all courses.

HR Document Library

PDFs uploaded by admins in categories: Employee Handbook, Benefits, Safety, Policies, Position Guidelines. Documents marked **Requires Acknowledgement** track per-staff confirmation.

§17 — COMPSET & COMPETITIVE INTELLIGENCE

Track competitor hotel rates via structured call-around logs. Each call records: date, staff member, quoted rates per room category, promotions, restrictions, availability notes.

The **Rate Position** dashboard shows your rates vs. market average — green (below market) or red (above market) indicator. Historical rate trend per competitor available for the last 30 calls.

§18 — FORECAST & STAFFING

Managers submit daily forecasts (Occupancy, Arrivals, Departures, Group Blocks, VIP Arrivals, Notes). The **Generate Shifts** button suggests staffing based on occupancy ratios configured in Property Settings. Monthly Forecast Calendar shows color-coded occupancy levels (green / amber / red) per day.

§19 — POSITION TO-DOS

Role-specific daily checklists tied to positions (e.g., "Front Desk AM", "Night Audit"). Staff check off items with timestamps. Managers see the **Completion Board** — all positions × completion % for today. **Marketplace To-Do Packs** provide curated checklists (Front Desk Opening, Night Audit, Room Inspection, etc.).

§20 — SUPERADMIN & PLATFORM OPERATIONS

All Properties View

Lists all hotel tenants with: name, slug, hotel ID, status, staff count, last activity, and actions (Switch / Settings / Health Check). Clicking Switch loads that hotel's context.

Environment Variables

Variable	Purpose
NEXT_PUBLIC_SUPABASE_URL	Supabase project URL
SUPABASE_SERVICE_ROLE_KEY	Service-role key (server only)
RESEND_API_KEY	Email service
STRIPE_SECRET_KEY	Stripe payments
ANTHROPIC_API_KEY	Claude AI (Right Answers)
BOUNCIE_CLIENT_ID / SECRET	GPS tracking
UBER_CLIENT_ID / SECRET	Ride dispatch

Test Tenant

Slug: test
Hotel ID: 466654c8-66db-4c08-9bf7-4b6326dbf3b8
Status: Development only — no real guests
